Women of any age with Existing Abnormalities* (cytology or histopathology)

Prior December 2017

Pap test result pLSIL/LSIL

Treated for histologically confirmed HSIL (CIN2 or CIN3)

Treated for histologically confirmed AIS

After December 2017

HPV test at next scheduled appointment

HPV detected (any type)

HPV not detected

Reflex LBC

Start or continue with Test of Cure**

Annual co-test (HPV & LBC) indefinitely#

Routine 5-yearly screening with HPV test for 25–74 year olds

Refer for colposcopic assessment

Prior to December 2017

** A woman who has been treated for HSIL (CIN2/3) should have a co-test (HPV and LBC) performed at 12 months after treatment, and annually thereafter, until both tests are negative on two consecutive occasions, when she can return to routine 5-yearly screening

# Until sufficient data become available that may support a policy decision that cessation of testing is appropriate

* Prior to December 2017
